BE IT REMEMBERED: That on this day came before me, the undersigned, a Notary Public

within and for the Western District of Indian Territory aforesaid, duly commissioned and acting E. J. Chastain

to me, executed the instrument in the foregoing instrument and stated that he had executed the same for the consideration and sum therein mentioned as

1. **Identify the main components of the system.** The system consists of a **client** and a **server**. The client is responsible for sending requests to the server, and the server is responsible for processing these requests and returning responses.

2. **Describe the data flow.** Data flows from the client to the server via a **network**. The client sends a request, and the server returns a response.

3. **Explain the communication protocol.** The communication protocol is a set of rules that govern the exchange of data between the client and the server. It defines the format of the requests and responses, the timing of the communication, and the error handling mechanisms.

4. **Discuss the security considerations.** Security is a critical concern in any networked system. The system must implement measures to protect the data being transmitted, such as encryption and authentication.

5. **Outline the performance requirements.** The system must be able to handle a large number of concurrent requests and return responses in a timely manner. This requires careful design and optimization of the system components.

6. **Summarize the overall architecture.** The overall architecture of the system is a **client-server** model. The client initiates the communication, and the server processes the requests and returns the responses.
